

Enter UserID and Password and then click “Sign in button”, which will jump into either of the following pages based on the id type you entered:

If the user entered non-admin id (e.g. stock) , it will automatically jump into this page. This page supports add, delete, search, open and edit an album in the ListView, which is used to display each album that stored in the “UserStore”. All of the buttons will invoke a conversation between App and the users, which asks them to enter the information they want to add, delete, create a new album.

If users clicked “Enter” button in the previous page, the app will jump into this page which allows users to view photos in the album through the ListView in this page. They can either move forward or backward on list of photos by clicking “<--” o “-->” button. “Back to Album” button will let them go back to previous page and “Logout” button will let them go back to the Log in page. On the bottom, the user can edit tag of each of song by clicking “Add tag” or “Delete tag”, both of which will start a dialog on the information users want to update. When the user selects a photo displayed on the up-right, say photo1 in the picture, we can copy or move this photo to a target album by clicking “copy” or “move” button after entering the album name in the respect text field. Furthermore, users can search photos in the album by entering the required tags or date based on personal need. The result will be displayed on the list view above button “copy” .

On the other hand, if ID users inputs is identified as “Admin”, it will show the admin all of users of this App on the ListView on the left. Furthermore, it allows admins to create or remove users by clicking “Create” or “Delete” button, which will lead admins to a dialog.

Finally, all “Log out” button allow users(both admin and non-admin) to logout the system.
